

New ULM Android WiFi Setup Guide

1. Select the network you want to connect to: ULMFaculty (for employees) or ULMStudent (for students)
2. If it prompts for a Domain, type in "auth.ulm.edu" and press ok.
3. Type in your information in the corresponding locations below:

The screenshot shows a dark-themed WiFi configuration screen. At the top, it says "EAP method" with "PEAP" selected. Below are several input fields, each with a red arrow pointing to it: "Identity" (containing "username@ulm.edu"), "Password" (containing "your password"), "CA certificate" (with "Use system certificates" selected), "Online certificate status" (with "Don't validate" selected), and "Domain" (containing "auth.ulm.edu" and a red note: "If you did not type this in beforehand"). There is also an "Auto reconnect" toggle switch which is turned on. At the bottom, there is an "Advanced" section with an upward arrow, and a "Phase 2 authentication" section with "MSCHAPV2" selected and "Anonymous identity" as an option.

4. Once you have entered all this information, press "Connect" at the bottom and you should be connected to the WiFi network. If you have any issues, please contact the IT Helpdesk for further help.
